HomeMD's philosophy of care is focused on optimizing the comfort, *quality of life*, and safety for the senior population in Michigan.

Our skilled gerontology nurse practitioners provide in-home primary medical care. We reinforce our quality medical staff with registered nurses that call patients, families, and caregivers to provide support, education, and resources.

HomeMD provides tablets to our patient population at no cost. We are the only visiting primary health care company to take this proactive step. Since the pandemic started, this step has been invaluable in providing continued services and maintaining the health of our patients.

Our goal is to *make a difference* in the lives of our seniors while in the safety and comfort of their homes.

Avoiding unnecessary hospitalizations is one of our top goals.
